Support Package

UG95 supports eCall function.

A car will have an electronic safety system automatically calling emergency services in case of a serious accident. Even if the driver is unconscious, the system will inform rescue workers of the crash site's exact whereabouts, and the rescues will be on its way within minutes. **The system is named as "eCall".**

Quectel supports eCall in 2G Modules as well and has been working on eCall since late 2011. Quectel has enough development experience on eCall to support and assist with customer's eCall application development.

DFOTA is Delta Firmware Upgrade Over-the-Air. DFOTA updating technology enables mobile device manufacturers to remotely update software. New software can be delivered over the air, eliminating the need for the user to bring the device to a service facility.

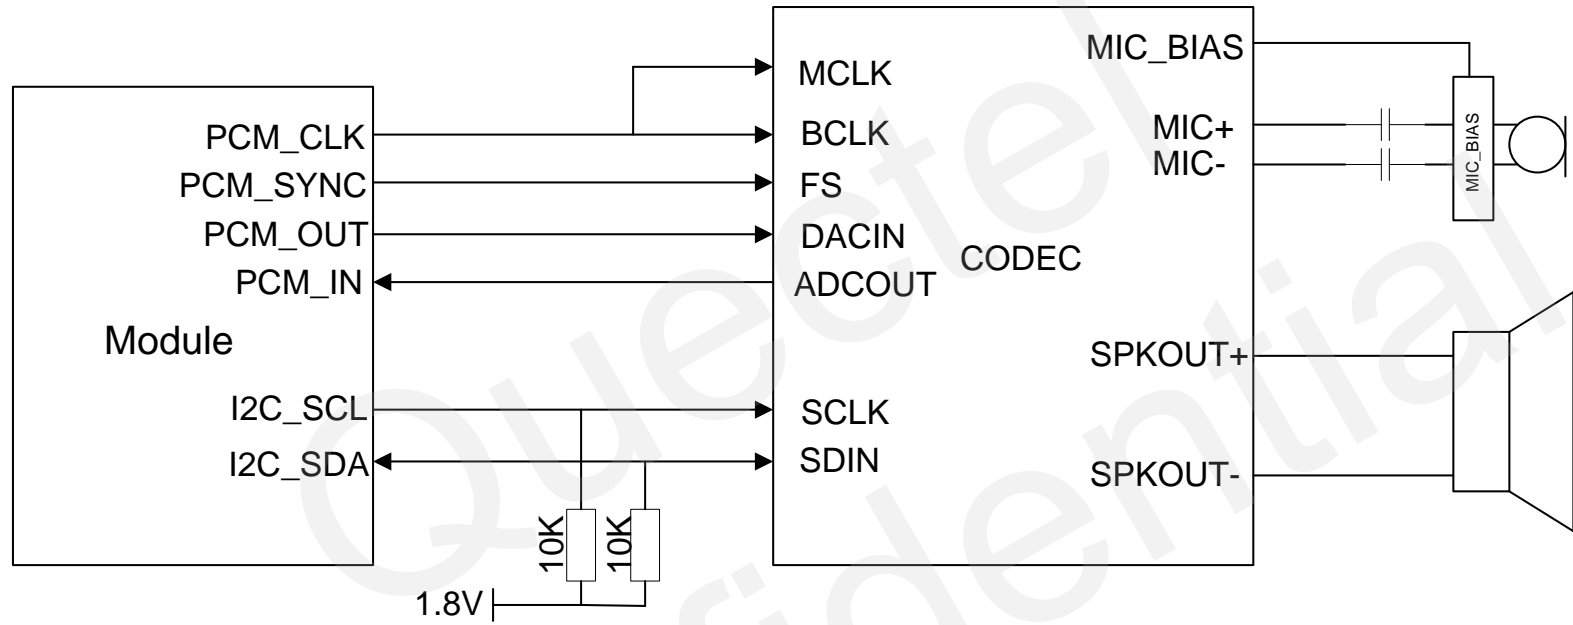

DFOTA Upgrade Process

- DFOTA Sync
- DFOTA Packet
- DFOTA Upgrade Error Handle

Analog Audio Solution

UG95 can implement the analog audio function through a total recommended solution as the above figure shown. This external circuit allows UG95 module to deliver exceptional audio performance, which is fully verified by Quectel.

Layout Compatibility

UG95 is compatible with GSM/GPRS M95 module. Compatibility design accommodates both M95 and UG95 modules on the same PCB footprint.
